

AMENDMENTS TO THE CLAIMS

Please amend claims 2 and 3 as follows:

1. (Original) An illuminating device, comprising:
 - a position data unit configured to generate position data;
 - a modulator configured to modulate an electronic signal on a power line based on the position data from the position data unit; and
 - a lighting unit configured to generate illuminative light from the electronic signal modulated based on position data.

2. (Currently amended) A cellular phone, comprising:
 - a light receiving unit configured to receive the illuminative light according to claim 1 modulated based on the position data;
 - a position detector configured to detect position data from the light receiving unit; and
 - a processing unit configured to transmit detected position data from a transmitter/receiver of the cellular phone.

3. (Currently amended) The cellular phone of Claim 2, wherein the light receiving unit configured to receive the illuminative light modulated based on the position data is a camera included in the cellular phone.
